Transfer of Care Plan: Paediatric to Adult Services
  Person with Developmental Disabilities ......................................................................................... 27

References ........................................................................................................................................... 29
Introduction

For youth with developmental disabilities (DD), the paediatric health care system can be a welcoming network of many physicians (paediatricians) and other healthcare professionals. Parents or caregivers make most of the healthcare decisions and the focus is on the family.

The adult health care system can be very different. The family doctor becomes the primary doctor and there may be fewer specialists and other health care professionals available. The family doctor will communicate with the youth directly and the young person helps to make his or her own healthcare decisions, when possible.

This Toolkit is designed to prepare the youth and his or her caregivers for transition from paediatric to adult healthcare.

What is Transition?

Transition is a process involving the purposeful, planned movement of youth with developmental disabilities from child-centred to adult-oriented care. Transition can be contrasted with a Transfer.

Transfer is a one-time event in which the responsibility of care for a young person with a developmental disability moves from child-centred care to adult-oriented care.

When Should Transition Begin?

The process of transition to adult-oriented care should begin in late childhood or early adolescence. In addition to seeing the paediatrician, the young person should be connected to a primary care provider/family doctor from age 12 to 18 or earlier. If possible, the youth continues to see the paediatrician(s) and also sees the primary care provider at least once a year, until a transfer of care is made at or after age 18. In this way, the youth will be familiar and comfortable with seeing the primary care provider. The primary care provider will know the youth, his or her strengths, his or her family/caregivers and his or her health challenges, when the youth transfers to adult care.

Key Timelines for transition from paediatric to adult health care system
(Also IEP planning through school system, focus on goals for life after school ends)

**Assessing Your Transition Needs**

**The Transition Readiness Checklist**

- A questionnaire that assesses the health care skills of the youth and family caregivers. The skills reviewed are necessary for a healthy transition to adult-oriented health care. The youth and primary caregiver should complete the questionnaire together.

- The tool looks at four different health skill areas:
  - Knowledge of Health Condition(s), Medication and Treatment
  - Taking Charge of Health Condition(s), Medication and Treatment
  - Taking Charge at the Doctor’s Office
  - Daily Living Skills and Thinking About the Future

- An answer of “Yes, I do this” shows that this skill has been accomplished – the youth is one step closer to a successful transition.

- An answer of “I am learning how to do this” or “I need to learn how” suggests it is time to delve into the corresponding set of tools to build up skills in that area.
• If the answer is “Someone else has to do this”, it is important to identify who will be able to help the youth with this health skill and to assess whether this caregiver needs further resources or skill development.

• Be sure to review whether “Does not apply to me” is truly not valid for the youth.

**Building the Skills Needed for the Adult Health Care System**

**The Transition Skills and Resources Tool Kit**

• This toolkit builds on the Transition Readiness Checklist. It identifies the skills needed in each area of readiness, and gives tools that will help the person with DD and his or her family or caregivers to achieve each skill.

• With the paediatrician or a member of the paediatric care team, identify the most important skills to work on, and review the resources listed.

• Find resources helpful to you and your young person with DD through community organizations, other families with young people with similar challenges, and the Internet.

**What Tools and Resources** are available to help young people with DD, their families/caregivers and primary care providers (family doctors and nurse practitioners)?

Summary of Resources Used in the Transition Skills and Resources Toolkit

For young people with DD:

- **Your plan-it**, from Children’s & Women’s Health Centre of BC Bookstore (for information on how to order a copy, please see [www.cw.bc.ca/library/pdf/YourPlanit_BookstorePoster.pdf](http://www.cw.bc.ca/library/pdf/YourPlanit_BookstorePoster.pdf))

  This was a youth health planner that was developed by and for youth to ensure they are informed about their health care, involved in their health care and their futures, and confident in their choices for adult health care. The planner provided a place for youth to record, sort and organize the health care information they require on a daily basis or when arriving at a new stage in their development or transitioning to adult care.

For families and caregivers:

- **Family care** book, from Children’s & Women’s Health Centre of BC Bookstore (no longer available for sale):

  Created for youth and their families to help them prepare for adult care and adulthood. Divided into four sections, the Family Care Book asked the questions: What are our daily needs? Why do we have those needs? When do we start planning for adulthood? Where can we find the answers and resources?

For paediatric and primary care providers:

- **Youth health resource** package, from Children’s & Women’s Health Centre of BC Bookstore (no longer available for sale):

  For clinicians working with the youth population, the package contained one copy each of: Setting the Trac, Family Care Book, Your Plan-It, Cocktails.

  Note: **Setting the Trac** was a resource manual to assist health care professionals in integrating developmentally-appropriate care and transitioning planning into their care of youth with chronic health conditions and their families.

- Hospital for Sick Children, Toronto – Good 2 Go Transition Program – [www.sickkids.ca/good2go](http://www.sickkids.ca/good2go)

- CPS Position Statement: Transition to adult care for youth with special health care needs [www.cps.ca/documents/position/transition-youth-special-needs](http://www.cps.ca/documents/position/transition-youth-special-needs)

### Knowledge of Health Condition(s), Medication and Treatment

1. I can explain my health problems/ disability.
2. I can name my medications and treatments and I can tell others what they are for.

*Health Knowledge: Discussion and plan (consider both the youth and his or her caregiver).*

### Taking Charge of Health Condition(s), Medication and Treatment

3. I am ready to make decisions about my health.
4. If I get sick, I know who to call or how to get help.
5. I know what to do if I have a medical emergency.
6. I keep track of my doctor and dental appointments.
7. I keep my important health information.
8. I take my own medications.
9. I know how much I should take of each medication.
10. I know what to do if I miss a dose of medication.
11. I know the side effects of my medication(s) and what to do if I have these side effects.
12. I call in my medication refills.
13. I know how my medications and treatments are paid for.
### Taking Charge of Health: Discussion and Plan (consider both the youth and his or her caregiver).

15. I take care of my medical equipment and supplies (e.g. wheelchair).

### Taking Charge at the Doctor's Office

16. I carry my health card in my wallet and bring important health information with me to doctor’s appointments/the emergency department (e.g., Portable Patient Profile, My Health Passport or Emergency Information Form).

17. I know the names of my doctors and other health care providers.

19. Before each doctor’s appointment, I make a list of questions I want to ask.

20. I can tell my doctor what I need during health care visits.

21. I spend time alone with my doctor at each visit.

22. I know I can talk to my doctor about sex and relationships.

### Daily Living Skills and Thinking About the Future

23. I know how my health conditions can affect my life and my future.

24. I know how much help I need with daily activities (e.g., bathing, dressing, cooking/eating, housework, managing money, using transit).

25. I can find help to get more education, find a job and find fun things to do.
26. I know how to stay healthy (e.g., with dental care, healthy eating and exercise).

27. I know how to keep safe and avoid risks.

28. I get help from people outside of my family (e.g., friends, community members).

29. With my family/caregivers, I am making plans for my future life.

Daily Living and Future: Discussion and Plan

Highlighted areas are relevant for all people with developmental disabilities.

Modelled after IWK Readiness Checklist, with input from Good2Go Transition Readiness Checklist, Got Transition – Changing Roles Checklist, and Health Care Skills by U of Washington Center on Human Development and Disability.

### Questions from Readiness Tool

**Key Skills**

(The person with DD or, if help needed, the primary caregivers)

- Can find resources for:
  - Education, volunteer and job opportunities
  - Recreational opportunities
  - Future income/financial assistance
  - Future housing alternatives
  - Crisis support
  - Other long-term planning needs

<table>
<thead>
<tr>
<th>Tools</th>
</tr>
</thead>
<tbody>
<tr>
<td>26. I know how to stay healthy (e.g., with dental care, healthy eating and exercise).</td>

Criteria for Inclusion of Tools and Resources in this Toolkit

- **Available and accessible**, preferably online, preferably free, English language.

- **Addresses** one or more of the transition-readiness skills from the Transition Readiness Checklist.

- Preference for information reflecting **Canadian health care system**. Note: government and community resources from non-Ontario sites would need to be adapted to Ontario system by Ontario parents/caregivers.

- **Ease of access, ease of use**. Could be used by young persons with DD and/or their parents or caregivers at home, and paediatric team or primary care provider in a clinic setting.

- **Brief listing** of one or two key relevant tool(s), not meant to be inclusive, avoids being overwhelming.

- Takes **brief time for quick review** to check for relevance to individual person with DD.

- **Reflects evidence-based or best current practice**.

- **Avoids re-inventing the wheel**. Where helpful information exists and is accessible, provides source/website address. (Sometimes excellent examples from other sources needed to be adapted to reflect Canadian system or to fit with other DDPCI tools, in which case, credit for the original work has been given.)

---

The best tools are:

- Designed specifically for the transition process, from paediatric to adult health care.

- Created for young people with developmental disabilities to complete themselves, or, if needed, with help from parents or caregivers.

Some tools are included that were designed for:

- Youth with complex health needs but not developmental disabilities.

- Adults with developmental disabilities, but applicable to youth with DD.

- Families or caregivers of youth with DD.

### Examples

**Introduction:** Hi. My name is Alexander Smith.

**Sentence 1:** I am 16 years old. I have Down syndrome. I have had asthma since I was little.

**Sentence 2:** I have been taking Ventolin and Flovent since I was three.

**Sentence 3:** I am here today because I can’t run anymore. I wheeze too much and can’t breathe.

**What I brought with me:** Here is my Today’s Visit form, a copy of my Portable Patient Profile, and all the current medications I take.

**Introduction:** Hi. My name is Maria Soares.

**Sentence 1:** I am 22 years old. I have epilepsy and a mild developmental disability.

**Sentence 2:** I take these medications (give doctor the bag with your medicines). I haven’t had any seizures lately.

**Sentence 3:** I am here today because I am sleepy all the time. My mother wonders if the medicines are making me sleepy.

**What I brought with me:** Here is my Today’s Visit form, a copy of my Portable Patient Profile, and all the current medications I take.

**Introduction:** Hi. My name is Sandoo Singh.

**Sentence 1:** I am 19 years old. I have Fragile X syndrome.

**Sentence 2:** I haven’t seen a doctor since I saw my paediatrician Dr. King two years ago.

**Sentence 3:** I am here today because I need a form filled out by a doctor for a program I want to go to.

**What I brought with me:** Here is my Today’s Visit form, a copy of my Portable Patient Profile, and all the current medications I take.

### Now it’s your turn

What would be most important for you to tell any doctor or health care professional you are seeing?

**Introduction:** Hi. My name is ________________________________.

**Sentence 1:** I am ____ years old. I have (briefly name your diagnosis and/or health problem).

**Sentence 2:** I usually see my doctor every ____ months for ________________ (tell why you usually see your doctor) and take medications for ________________________________.

**Sentence 3:** I have a problem with ________________________________ and that’s why I’m here today.

**What I brought with me:** Here is my Today’s Visit form, a copy of my Portable Patient Profile, and all the current medications I take.

---

Adapted for Persons with Developmental Disabilities from SickKids® MyHealth 3-Sentence Summary

Family/Caregiver Guide to Organizing Health Information

Especially important for the transition from paediatric to adult health care services

As family/caregivers, you will need to keep and organize important health information about the person with development disabilities (DD), starting from a young age. Having this information will help you and the person with DD:

- To communicate more effectively with doctors and other health care providers;
- To keep track of appointments and reports for the person with DD; and
- To avoid having to repeat the same information over and over to new health care providers, e.g., when making the transition from paediatric to adult health care services.

**Methods** you can use to organize health information for the person with DD:

1. **Paper-based:** Keep the person’s health-related information in a three-ring binder (on page 2, see suggestions for sections to use. These can be adapted to the particular needs of your young person, e.g., if your young person has epilepsy, you may want to have a section for epilepsy).

2. **Computer-based:**
   a) Use one of the available ‘apps’ for computers or Smart phones.
      - Look under apps for health information, personal health record, health organizer, medication record.
      - The amount and type of information varies among these apps – choose the most suitable one for your young person.
      - Many have the ability to send the file via e-mail, so information could be sent to a new doctor or health care provider.
   b) Keep the person’s health-related information on a computer and save it to a USB key to take to medical appointments, so that new health care team members could download essential health information.

**Resources**

1. **Paper-based: Your Plan-it** – This excellent Canadian resource is dedicated to youth with chronic conditions and was developed by the Children’s and Women’s Health Centre of BC. It helps with the transition from paediatric to adult care. For information on how to order a copy, please see [www cw bc ca library pdf YourPlanit_BookstorePoster pdf](http://www.cw.bc.ca/library/pdf/YourPlanit_BookstorePoster.pdf)

2. **Downloadable forms:** The American National Center for Medical Home Implementation – [www medicalhomeinfo org for families care notebook](http://www.medicalhomeinfo.org/for_families/care_notebook) has many useful and downloadable forms. You can choose the ones you need for a personalized Health Binder or computerized Health Information Folder for the needs of your child/young person. (Note: you would need to adapt government and community resources to your location.)

### Past Medical Concerns or Hospitalizations:

### Recommendations:

- Portable Patient Profile or medical summary
- Immunization Record
- Report of genetic assessment
- Psychological and functional assessment reports
- Other significant tests and assessments
- Most recent Transition Readiness Checklist

To enhance collaboration…

**The Paediatrician or Paediatric Team will:**

- Perform **Transition Readiness Checklist** when the patient is 14 years of age and, with the patient and family or guardians, document discussion and skill building priorities. Reassess and continue to build skills yearly.
- Encourage youth with DD to have a **yearly visit with a primary care physician by the age of 16**, to facilitate patient-physician relationship and transition.
- **Identify key health issues and recommendations** to patient, family and primary care physician.
- Send this **Transfer of Care Plan** to primary care physician.
- Telephone the primary care physician/nurse practitioner to complete the transfer.

**The patient, with support from family/caregivers, will:**

- Work on learning and practicing skills identified in the **Transition Readiness Checklist**.
- Show up for appointments and be on time.
- Bring written questions (e.g., on **Today’s Visit** form: [www.surreyplace.on.ca/Documents/Today’s Visit.pdf](http://www.surreyplace.on.ca/Documents/Today’s Visit.pdf)), **Portable Patient Profile** and all current medications, including any alternative, complementary therapy supplements to doctors’ appointments.
- At each visit, tell the doctor the most important health issue for the visit and any concerns or questions.
- Remember to take medications, follow through with tests, and follow treatments (list any specifics).

**The Primary Care Physician/Nurse Practitioner will:**

- Reassess patient’s skills from **Transition Readiness Checklist** with patient and family/caregivers, addressing gaps in knowledge and skills.
- Follow through on recommendations and issues identified by the paediatrician as needing attention.
- Monitor patient’s general health.
- Work with patient and Substitute Decision-Maker on issues of **health care decision-making and informed consent**: [www.surreyplace.on.ca/Documents/Informed Consent in Adults with DD. pdf](http://www.surreyplace.on.ca/Documents/Informed Consent in Adults with DD. pdf)
- Make referrals to adult specialists, as needed, and if not done by paediatric specialists.
